

Security First

Our streaming video partner, WatchMeGrow, keeps your data safe.

We make security a top priority.

You can help by following simple best practices.

WatchMeGrow's team works constantly to improve and update our service. These are a few of the extra security steps we take to protect your privacy:

- **Our video is encrypted** with 256-bit SSL security certificates to protect your privacy and minimize the risk of data being compromised.
- **The WatchMeGrow system** automatically disables accounts that haven't been accessed recently, temporarily disables accounts after too many incorrect logins, and allows only one user at a time with the same login credentials.
- **Only approved users** have access to streaming video at our school; as families leave, they are removed as users.
- **Each family's access is limited** to their child's classroom and any approved common area cameras, as authorized by our center director.

Keep these best practices in mind when streaming video:

KEEP YOUR LOGIN CREDENTIALS SAFE

Please don't share your username and password with anyone. This helps us ensure only authorized users can stream video.

REMEMBER TO LOG OUT

If you forget, you'll be automatically logged out when your session is not active, for your child's and our school's security.

RESPECT EVERYONE'S PRIVACY

Please don't record video or take screenshots. It violates the privacy of the other children in the class, the teachers, and their families. It also violates WatchMeGrow's terms of service and can result in suspension or termination of your account.
